- A.** A group of university students from Brazil have been given the job of discovering and locating all the waterfalls in their country. It is not easy because very often the maps are not detailed. The students have to remain in water for long periods of time. Every day they cover a distance of 35 to 40 kilometers through the jungle, each carrying 40 kilos of equipment.
- B.** For many years now, mail-order shopping has served the needs of a certain kind of customers. Everything they order from a catalogue is delivered to their door. Now, though, e-mail shopping on the Internet has opened up even more opportunities for this kind of shopping.
- C.** Another generation of computer fans has arrived. They are neither spotty schoolchildren nor intellectual professors, but pensioners who are learning computing with much enthusiasm. It is particularly interesting for people suffering from arthritis as computers offer a way of writing nice clear letters. Now pensioners have discovered the Internet and at the moment they make up the fastest growing membership.
- D.** Shopping centres are full of all kinds of stores. They are like small, self-contained towns where you can find everything you want. In a large centre, shoppers can find everything they need without having to go anywhere else. They can leave their cars in the shopping centre car park and buy everything in a covered complex, protected from the heat, cold or rain.
- E.** Not many people know that, back in the fifties, computers were very big, and also very slow. They took up complete floors of a building, and were less powerful, and much slower than any of today's compact portable computers. At first, the data they had to process and record was fed in on punched-out paper; later magnetic tape was used, but both systems were completely inconvenient.

**F.** Potholing is a dull name for a most interesting and adventurous sport. Deep underground, on the tracks of primitive men and strange animals who have adapted to life without light, finding unusual landscapes and underground lakes, the potholer lives an exciting adventure. You mustn't forget, though, that it can be quite dangerous. Without the proper equipment you can fall, get injured or lost.

**G.** Substantial remains of an octagonal Roman bath house, probably reused as a Christian baptistry, have been uncovered during a student training excavation near Faversham in Kent. The central cold plunge pool was five metres across, and stood within a structure which also had underfloor heating and hot pools, probably originally under a domed roof.

Before the Hubble Space Telescope was launched, scientists thought they knew the universe. They were wrong.

The Hubble Space Telescope has changed many scientists' view of the universe. The telescope is named after American astronomer Edwin Hubble, **A**\_\_\_\_\_.

He established that many galaxies exist and developed the first system for their classifications.

In many ways, Hubble is like any other telescope. It simply gathers light. It is roughly the size of a large school bus. What makes Hubble special is not what it is, **B**\_\_\_\_\_.

Hubble was launched in 1990 from the "Discovery" space shuttle and it is about 350 miles above our planet, **C**\_\_\_\_\_.

It is far from the glare of city lights, it doesn't have to look through the air, **D**\_\_\_\_\_.

And what a view it is! Hubble is so powerful it could spot a fly on the moon.

Yet in an average orbit, it uses the same amount of energy as 28 100-watt light bulbs. Hubble pictures require no film. The telescope takes digital images **E**\_\_\_\_\_.

Hubble has snapped photos of storms on Saturn and exploding stars. Hubble doesn't just focus on our solar system. It also peers into our galaxy and beyond. Many Hubble photos show the stars that make up the Milky Way galaxy. A galaxy is a city of stars.

Hubble cannot take pictures of the sun or other very bright objects, because doing so could "fry" the telescope's instruments, but it can detect infrared and ultra violet light **F**\_\_\_\_\_.

Some of the sights of our solar system that Hubble has glimpsed may even change the number of planets in it.

2. which are transmitted to scientists on Earth.
3. which is invisible to the human eye.

On the morning of the sailing, Tracy hired a limousine to drive her to the pier. On deck, a steward looked at Tracy's ticket and **11** \_\_\_\_\_ her to her stateroom. It was a lovely suite with a private terrace.
